Application/Control Number: 10/565,931

Art Unit: 3724

1. Applicant's appeal brief of 08 dec 09 has been considered. In light of Applicant's arguments, Examiner has formulated an improved rejection that more thoroughly addresses Applicant's concerns. Please note that the old secondary reference to Tanaka used a mechanical switch to pop out the trimmer, but the new secondary reference to Ullmann using the electrical mode switch to pop out the trimmer. In addition, a new 112, 1st paragraph rejection has been made. Accordingly, the reopening of prosecution has been authorized by Supervisory Patent Examiner Boyer Ashley.

Page 2

2. Claims 1,3 and 5-8 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The device, as seen in figure 5a and described on pages 4 and 5 of the specification, is non-functional. The trimming function, seen in figure 5b, works fine, but when electrical contacts 36 are slid down in figure 5a, they short out the power supply. It is easy to see that electricity leaving the power supply in figure 5a via wire 33 will proceed along the diagonal wire, then down the left switch 36, down the wire 32 and right back to the opposite pole of the power supply. This situation can quickly lead to fire or at the very least significant overheating.

Application/Control Number: 10/565,931 Page 3

Art Unit: 3724

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claim1,3,5 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Futterer et al.(3,213,536) in view of Ullmann et al.(5,701,673).

Futterer shows a razor with most of the recited limitations including;

A cutter (16),

A trimmer (15),

A drive (27),

Means for reversing (lines 4-14, column 2) the drive structure such that the trimmer is removed from the drive structure,

A unidirectional clutch (9).

Futterer's trimmer has only one position. However, these days it is ubiquitous to have the trimmer pop out from the razor and such that the trimmer starts only when popped out. An example of this is Ullmann (see figures 2a,3a,4a,5a). Ullmann's trimmer only has a cutting action when popped out, by way of engaging drives 10 and 11 only when popped out. It would have been obvious to one of ordinary skill in the art to have modified Futterer by placing his trimmer on a pop-out arm such that the trimmer starts only when popped out, as taught by Ullmann and many others, in order to have a trimmer that can reach hard-to-reach places such as ears and under the chin. Since Ullmann teaches popping out the trimmer via actuation of the electrical mode switch, the

ability to pop out the trimmer on Futterer would also occur via the electrical mode switch (his motor reverse switch), and thus the reversing of the motor would occur in response the popping out of the trimmer.

In regards to claim 3, Futterer has a switching circuitry (28).

In regards to claim 5, Futterer's trimmer drive "branches off" at a shaft (1, see figures 1-3).

5. Claim1,3 and 5-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Futterer et al.(3,213,536) in view of Ullmann et al.(5,701,673), as set forth above, and further in view of in view of Bergsma (US 4,355,464).

In regards to at least claims 6 and 8, the modified apparatus of Futterer still does not disclose the shaver wherein the number of cycles per unit of time of the driven trimmer is higher than said number of revolutions per unit time of the at least one driven cutter. Bergsma discloses a shaving apparatus a plurality of rotary shaving elements (2, 4) and a trimmer (21). The trimmer and the plurality of rotary shaving elements are both driven by a motor (6) and a gear system (see figures 1 and 2) such that the frequency of the trimmer and the RPMs of the rotary cutter can be selected independently (see column 2 lines 27-32). Further, Bergsma discloses that it is preferable to have the rotary shaving element be driven at a lower number of RPMs than the frequency of the trimmer so as to reduce wear, friction, heat, and noise (see column 1 lines 24-27). It would have been obvious to a person of ordinary skill in the art at the time the invention was made to further modify the shaver of Futterer to have the

number of cycles per unit of time of the driven trimmer be higher than said number of revolutions per unit time of the at least one driven cutter in view of the teachings of Bergsma in order to reduce wear, friction, heat, and noise.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth Peterson whose telephone number is (571)272-4512. The examiner can normally be reached on Monday-Thursday, 7:30AM-5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Boyer Ashley can be reached on (571)272-4502. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

/Kenneth Peterson/ Primary Examiner, Art Unit 3724
